

Title: Design Rate Limiter

Design a rate limiter that limits each user to at most N requests per T seconds.

Implement a class:

- `allowRequest(userId)` $\rightarrow$ returns true if request is allowed, false otherwise

Example:

- $N = 3, T = 10$ seconds
- Requests:
 - user1 $\rightarrow$ allowed
 - user1 $\rightarrow$ allowed
 - user1 $\rightarrow$ allowed
 - user1 $\rightarrow$ rejected
